Britain Buys Mexico Fields.

Absorption of Mexican Shares Gives England an International Grip.

Deal Involves Transfer of 2,500,000 Shares at Six Pounds Each.

BY GEORGE W. GLASS.
LONDON, March 16.—The British government has today announced that it has agreed to purchase 2,500,000 shares of the Mexican Petroleum Corporation at six pounds each.

The deal, which is being financed by the British government, will give England a controlling interest in the Mexican Petroleum Corporation, one of the largest oil companies in the world.

The shares, which are being sold at six pounds each, are being offered to the public by the British government.

MIDDLE WEST NEWS IN BRIEF.

CHICAGO, March 16.—An unexpected windfall of \$62,000 from the estate of William Austin, formerly of Appleton, Minn., who died recently, California, has been left to the Masonic Home, which is financing the new Masonic Home for disabled Masons.

KANSAS CITY, March 16.—Sovereign Inspector-general, Scottish Rite Masons, Judge Alexander G. Cichran, St. Louis, was the principal speaker at a dinner attended by 500 Masons at the Scottish Rite temple Saturday night.

Circled by hurricanes, tornadoes and water spouts, Kansas City's train service was disrupted Saturday. Neighboring towns report heavy damage from flooded basements, roofs blown off and wire communication prostrated. No loss of life is reported as yet.

Rufus C. Kemper, son of W. T. Kemper, will be the new president of the City of Kansas, which opens at Eighteenth and Grand Monday morning. He has just returned from the army serving in the Philippines.

He succeeds his brother, James, who was compelled to hurriedly resign from the office because of ill health. Mrs. Kemper's health was impaired by the strain of war work in Washington, where, though S. Wood, her salary was the modest sum of \$24 a month.

MINNEAPOLIS, March 16.—Thos. D. Campbell, "The West's" greatest farmer, who has undertaken to raise more than \$10,000,000 worth of wheat on 200,000 acres in Montana for the harvest of 1921, was in Minneapolis yesterday to do his spring buying. He expects to spend \$100,000 in new spring traction engines, grain bins, agricultural implements and general supplies.

William H. Schaefer, who is in jail awaiting his trial on many indictments, is busy trying to figure out how he was going to pay his income tax. He admits he made \$200,000 during 1918, but has only \$10,250 to pay the tax. Even a deputy Internal Revenue officer couldn't figure it out.

Thomas Van Lear, former Mayor of Minneapolis, yesterday was asked to refund \$100,000 which he had been improperly paid him as salary for the first five days in January, but he had ever before. Mayor Meyers took his position. H. B. Getchell, former Alderman of the Tenth Ward, and J. D. Orrison, former of the Twelfth, were also asked to refund \$24.20. The City Attorney ruled today that the men had been overpaid.

Mrs. Caroline E. Thorpe, mother of S. S. Thorpe, Minneapolis real estate man, and F. A. Chamberlain, vice-president of the First and Second National Bank, died last night at the Thorpe home, 82 Twelfth street south, where she lived for the past forty years. She was 82 years of age.

DETROIT, March 16.—Col. E. Markham has been appointed chief engineer of the city of Detroit and will work in the Detroit division. Receipts on the last day for payment of income taxes exceeded all expectations. Detroit's share will exceed \$120,000,000.

No parade will be held by Detroit tonight. Monday, the largest function will be the annual entertainment of the Ancient Order of Hibernians, at the Elks' Temple, with Bishop Gallagher as principal speaker.

Sunday was a busy day on the Dixie highway, confessions aggregating 2,000 quarters of booze and twenty-three automobiles.

One hundred and eighteen Detroit nurses will arrive home Monday from France, and will be welcomed by a parade, headed by Mayor Couzens, down Woodward avenue.

ST. PAUL, March 16.—James B. McLaughlin, banker, bank robber, and humorist, who was a deft at the police, was charged with the robbery of the St. Paul National Bank and Trust Co. on March 15. The bank was closed for several days.

ST. PAUL, March 16.—The bridge over the Mississippi river, which was damaged by a fire on March 15, is being repaired. The bridge is expected to be open by the end of the month.

ST. PAUL, March 16.—The bridge over the Mississippi river, which was damaged by a fire on March 15, is being repaired. The bridge is expected to be open by the end of the month.

The Management of Property

Acting as Agent or under an Agency Trust, this bank cares for and manages millions of dollars worth of property entrusted to it by living owners. Under such management, we attend to

Collection and remittance of rents.

Payment of taxes, assessments and insurance.

Making of repairs and general upkeep of property.

This service is advantageous to the man who desires a complete record of income and

disbursements in connection with his property holdings, or to the man who, for business reasons or because of ill health, wishes to be relieved of details incident to the care of property. Such service is appreciated, also, by women and by those who spend much time in travel.

Our Officers will be glad to talk over with you the advisability of an Agency Trust for your property interests.

CURB ON RELIGION IN GERMANY CRITICISED.

NATIONAL ASSEMBLY DISCUSSES ATTEMPT TO PREVENT SCHOOL STUDY.

WEIMAR, March 16.—Some of the delegates of the Right and Center in the course of debate on the interpellation regarding the attempt by various states to prevent religious instruction in schools, sharply criticized this and demanded government action to prevent a recurrence.

The clerical delegate, Mumm, said: “The revolutionary government at Hamburg has retained the brothels and abolished religious instruction. In Brunswick the people's commissioners assembled 1500 school children in the cathedral for anti-Christian exercises.”

Heilmann, Majority Socialist, explaining his party's attitude, said: “The church, like all social institutions, is subject to steady changes and will eventually disappear.”

Herr Bell, Colonial Minister, replied that the government was not able to interfere in such matters against the various states. The subject, he added, would be adjusted in the constitution.

FAVOR FEDERAL FARM MANAGEMENT BUREAU.

WASHINGTON, March 16.—Expansion of the office of farm management of the Department of Agriculture has been recommended by a committee of experts appointed by Secretary Houston to outline projects for more extensive work. The report said the office should include farm economics as well as management and that the name of the bureau should be changed to that of farm management and farm economics.

The committee recommended that the work of the bureau include costs of production, farm organization, farm finance, labor, history and geography, foreign and domestic agricultural relations, land utilization and related subjects.

Another recommendation was that men employed to carry on the work should be of the caliber of those now at the heads of departments in the best agricultural colleges of the country, and that the salaries offered should be sufficiently large to attract such men.

Don't Go Back East

Without Having Made This Entrancing Trip

By WM. WRIGLEY, JR.

Don't have to say to your friends when you go back home, “No, I didn't see Catalina Island.”

That would be like saying, “Yes, I was in Italy, but I didn't go to Rome.”

Catalina Island is only 48 miles from Los Angeles.

You can go from Los Angeles, spend three hours

on the Island, and return the same day, if you want to.

That one-day trip will repay you if you cannot remain longer.

But I suggest that you plan to stay at least three days. For you won't want to return after only three hours when you see what those three hours disclose.

Incomparable Views

Different from Anything You Have Ever Seen

Don't miss Catalina's mountain-and-sea views.

This is scenery that is unlike any other that you may have enjoyed so far in California. Because of its difference as well as its grandeur, it is probably unmatched anywhere else in the world.

You look over thousands of square miles of ocean from mountain tops; and miles back into the mainland, with whole cities and towns in the one vast view.

With rented horses, or on foot, you can have more scenic thrills at Catalina in one morning than at any other place I know.

Lively Interest

For an afternoon's entertainment, there are the famous Ocean Gardens of Catalina where one sees scores of queer sea-animals, beautifully colored fish, and strange ocean foliage.

You look through the glass bottom of a boat—sometimes through 80 feet of water—and see the ocean's floor and its life almost as clearly as if there were no water there.

Beautiful sea-ferns, mosses and flowers gracefully wave to and fro with the undulating motion of the tides.

The fish dart hither and thither, flashing their striking colors in the sun, or move lazily about among the foliage and rocks.

Seal Rocks

Seal Rocks are another point of interest. The boat from which you see the Ocean Gardens passes close to these great rocks.

You see the seals as they live in the ocean, not as you have seen them in a circus. Here they play, dive, swim and fight. You see here the real life of seals.

There are seals of all sizes, scores of them, old and young.

This is a sight that children especially ought to see.

For Real Rest

But entirely aside from its unusual interest, there is no better place than Catalina Island if you want merely quiet rest.

Its sea air brings relaxation. It is excellent for “nerves.”

Even a short stay of three or four days benefits immensely. You may rest at the Hotel St. Catherine, which is new and modern; or on the beach nearby are

secluded coves where one may take magazines and books. Back of the hotel are peaceful canyons where one may spend whole afternoons, undisturbed.

Get Up a Party

Get up a party now among your friends for a three or four-day visit to this enchanted island.

Motor from Los Angeles or take Pacific Electric cars to Los Angeles Harbor (San Pedro). There are great shipyards at the harbor in sight of the boat as it leaves for Catalina.

You'll see U. S. submarines plying back and forth; and you'll pass Dead Man's Island, which is ever diminishing in size.

In fact every moment of your trip to Catalina will be interesting and delightful.

I know you'll remember this trip always. That is why I urge you to get up a party and see Catalina before you go back East.

Wm. Wrigley, Jr.

Santa Catalina Island

New Hotel St. Catherine

The new Hotel St. Catherine is at the water's edge at the foot of a beautiful canyon. There could hardly be a better location for a good hotel.

There are 160 rooms with connecting baths. All are outside rooms.

Reading lights beside each bed. The furnishings are all new and complete.

Meals are superintended by a former Fred Harvey chef. The service and conveniences are of the strictly first rate kind.

Boat Schedules

Trains Lv. Los Angeles, 6th & Main	9:15 a.m.

ENTIRE FAMILIES BEG.

The economic condition of three-quarters of the Jews in Warsaw are extremely bad. Entire families are seen begging in the streets for a few pennings to buy bread which costs two marks a loaf. Thousands of people walk the streets in rags. The children are stunted, youngsters of eleven look no larger than children of seven. The market place is full of Jews carrying gasping

Dr. Boris Hogen of New York, who is directing relief in Warsaw on behalf of the Jewish Relief Committee, said that the committee of American funds for Jewish war relief said:

"With the food, which arrived at Danzig, we are taking care of more than 70,000 of the worst cases of starvation, and expect to tide these cases over for a few months. But this is only a drop in the bucket."

and hobbling about a sort of wooden stiope the next. But this brave resistance was ended when she was taken further than the conference hall. Or, if it did, it made no impression, either on the manufacturers of the war or on femininity in general.

The hobble skirt is just as popular this season as it was several years ago. It has had experienced the comfortable security of uniforms or had taken over so much of the place of the uniform that it is a step backward toward the shackles that the sex is striving to throw off, but it has one fascinating merit in its own right.

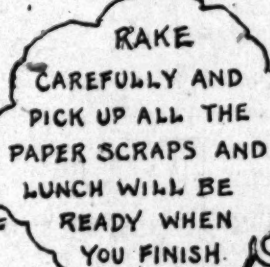

The truth is that the majority of hundred dollar gowns a season simply reduce the number when they started doing so and buying Liberty Bonds. So many society women, moreover, spent their days in the city that it was not possible to have little use for other forms of street clothes, and at times—especially during Liberty Bond campaigns—these women were obliged to wear one frock again and again.

On the laboring people on the other hand, were for the first time making big money. In the large war plants it was war material for which they got as much as \$25 a day, and, naturally their wives

The clothing trade is already preparing to placard the country with billboards and leaflets on the advisability, and even the duty of people to "dress up." In fact, every possible angle for advertising is being used to aid this important propaganda. In some cities, an agreement has even been made with the film theaters to carry slides reading: "Now that the war is over, dress up!"

It is a pity that the propaganda of course will be patriotism that is being the most appealing popular emotive at present. A little while ago, it was patriotic to cease buying

By Fox.

over to designers and cutters and the women's wardrobe is being changed. The editor of the well-known daily, *Women's Wear*, declares that it is not or that, at least, it doesn't have to be. "If women refused to wear the hobble," he says, "the retailers could not sell all the quantities of stock would pile up on the manufacturer, and he would be forced to reduce the price to the consumer. As a matter of fact, it is

...mitted strong clear bright eyes; dew and al-

ed traits, if its tail is pulled too often or its fur continually stroked the wrong way.

and this present-day world is that it has only a spirit that can alter the forms of the content. The outstanding feature of the church of the new era is that it is catching the spirit of this Christ and the spirit of labor and the spirit of commerce and trade. The industrial leaders of the world are the Big Five of the peace movement possessed by this spirit. The spirit of the church of the new era is the spirit of the new era and it is not a narrow one.

The Story of Texas Oils

In response to the country-wide interest in the oil industry, the author has written a book which tells the story of the growth of the oil industry in Texas, from the first discovery of oil in 1821 to the present time. The book is a history of the oil industry in Texas, and is a must for every oil man.

HUNT IS ON FOR MAIN OIL SAND.

Believe Kern "Mother Lode" not Yet Discovered.

Standard Experts Look for it Near Poso Creek.

Thousand-Barrel Well Comes in at Santa Maria.

(SPECIAL CORRESPONDENCE)

BAKERSFIELD, March 14.—That the main oil stratum, which is to the petroleum industry what the "mother lode" is to the mining industry, is yet to be discovered in Kern county, and that it will be found in the vicinity of Poso Creek, is the opinion of geologists who have been making observations for the Standard Oil Company and private individuals.

This opinion is being backed up with dollars and dimes by the Standard, which has already put down drills at work with its first well, on section 2, 28-27, about four or five miles from any other producing well in the Kern River field. This announcement made last week is followed with the cheering news that the same company will not stop with two test wells.

The terms of the leases which have been taken on property adjoining call for other wells, and in line with this, it is reported that a well will be drilled on every ten acres of section 27, or in other words sixty wells will be drilled on this section alone, which is a mile and a half wide from the Poso Creek prospect.

WELL PROVES TERRITORY.

Well No. 4, companion to No. 2 on section 27, was brought in on February 12 and has since been averaging about 100 barrels daily, thus putting the new field on a better basis than it has been with the long struggle with water going on the well having been successfully shut off from inflations. The well is producing from a depth of 2514 feet.

In the Poso Creek section to the north, the Standard is planning to drill on sections 1, 2, 5, 8, 12 and 21 without taking up further leases and it is the opinion of experts that somewhere within the wide radius of this section the "mother lode" of oil will be tapped and the main stratum of the industry will start to the north of the old Kern River field, which has always been held by geologists as tributary to the main oil sand.

Land in the Poso Creek section is nearly all in private hands and beyond the danger of being taken by future withdrawal order, always possible wherever public land exists in the neighborhood of an oil discovery so long as Congress continues its policy of inaction. The Standard land is patented and except that some of the land in Kern county will experience a big oil boom.

IN THE ELK HILLS.

In the Elk Hills, the Standard's well No. 1, on section 26, 28-27, continues to produce close to 400 barrels of thirty-nine gravity oil daily from a depth of 2800 feet.

The company is down close to 1000 feet with the rotary in its No. 2 well. Circulation has been lost in one time in the well causing considerable delay. Well No. 2 is past the 700 feet mark and good time is being made. No. 3 has been drilled, but drilling will be held up until a showing has been made in Nos. 2 and 3. Lumber is on the ground and the company is building four large bunkhouses and some other buildings and about sixty men are employed.

CEMENT LEROO WELL.

The Associated Brown well No. 1, near Lerdo has again been cemented off.

The Standard well No. 20 on section 31, 22-22 on the Elk Creek property near Lerdo, brought in a few weeks ago, has yielded close to a good 200 barrels daily. The well increased from a fifty-barrel initial production.

The nine No. 2 has been perforated in the No. 41 well of the General Petroleum Company in the Lost Hills on its Lost Hills Development Company lease. The same process has been undergone in the No. 6 well of the United Western Oil Company on section 2, 22-22 where 400 feet of pipe was perforated.

SANTA MARIA FIELD.

The Union Oil Company has just brought in its No. 46 well on the Newlove ranch in the Santa Maria field at a depth of 2900 feet with an initial production of 100 barrels daily. The well is in the southeast corner of the Newlove ranch near the line of the Western Union. It is one of the best to date on this property.

Until E. L. Doherty gets back from Paris and looks over the situation, it will not be known whether he will do with the Bell ranch off operations and wells in the Santa Maria field, all of which are now his personal property since the lease has been surrendered by the Pan-American and California Petroleum Corporation. Meanwhile the work is being carried on for his personal account under the management of J. C. Anderson, who is also manager for the Pan-American.

MINE BUREAU ISSUES QUICKSILVER BULLETIN

State Mineralogist Hamilton announced yesterday that the new bulletin of the State Mining Bureau on quicksilver has been received from the printer and is now ready for distribution. It is Bulletin No. 78, entitled "Quicksilver Resources of California," by Walter W. Bradley of the bureau's staff. It is the first work published in fifteen years dealing distinctly with quicksilver and its metallurgy, and had but two predecessors in this particular field—G. F. Becker's "Geology of the Quicksilver Deposits of the Pacific Coast," monograph XIII of the United States Geological Survey, and William Forrester's "Quicksilver Resources of California," bulletin No. 27 of the State Mining Bureau. The new publication covers a much greater scope, particularly with regard to the ore dressing and metallurgy of quicksilver.

California yields approximately 70 per cent of the quicksilver output of the United States, and, since 1916, has produced a total of 2,137,728 flasks, valued at \$101,952,568.

Speaking of Russia!!!

LISTEN, OLD BOY! FIVE YEARS AGO A LEAGUE OF NATIONS WASN'T EVEN DREAMED OF. BUT NOW IT'S A HAPPY REALITY. THE WORLD IS PROGRESSING!

THE BIG PROGRESSIVE NATIONS ARE NOW WELDED TOGETHER INTO ONE BIG FAMILY, NOW TAKE THE UNITED STATES, ENGLAND, FRANCE, ITALY, JAPAN, RUSSIA—

QUITE SO, QUITE SO!

RUSSIA?

YES, AND LOOK AT THE DARN PLACE NOW!

CERTAINLY! RUSSIA'S ONE OF OUR MOST PROGRESSIVE NATIONS. WASN'T IT THE FIRST NATION TO ADOPT PROHIBITION?

THEY SAY YOU SAY

WE OWN AND OFFER, SUBJECT TO PRIOR SALE AND CHANGE IN PRICE.

minerals are of value for collections in colleges, etc.

Fuller's Earth.

SHINGLE, March 1.—Q: Does enclosed sample represent any market value in rock or mineral? F.

A: The sample is of a bluish color; it is opaque, soft, dull, feels greasy, and in fracture is earthy. It yields to the nail and shows a shining streak. It adheres to the tongue but slightly; becomes translucent in water and falls to a pulpy impalpable powder, without forming a paste with water. The sample is in specific weight 2. It is an earthy hydrous aluminum silicate, and contains approximately 48 per cent silica, alumina 28, and water 25 per cent. Fuller's earth was formerly used in great quantities by manufacturers of cloth, for cleaning woolen cloth, and the reasons for such uses are that the earth possesses a wonderful capacity for absorbing grease and oils, and this operation is called "fulling"; hence the name fuller's earth was given to the substance employed.

Owing to the many deposits of impure fuller's earth, other substances for this fulling and cleaning of woolen cloths are now used for the purposes indicated, but, owing to the high grade of the sample, it is probable that it can be marketed in California for the filtering of natural oils and for clarifying the various greases at abattoirs.

Complex Sulphides.

PRESCOTT (Ariz.) March 2.—Q: I am sending you a specimen of rock found near Prescott. Persons who claim to know, say it is "nickel ore." Please test it. I always value your information highly. R.

A: It is to be regretted that the sample was too minute for a good qualitative analysis. Owing to the many substances present (volatiles, arsenic and sulphides), a positive reaction for nickel could not be determined from the small quantity of material at hand.

Under a powerful microscope cubes of galenite appear in the sample, with some pyroxene (coccoites), zinc, arsenic, copper present and cobalt detected sparingly. This ore should be quantitatively analyzed.

Doubtful Ores.

BURBANK, March 2.—Q: One sample from San Fernando range about one and a half miles east of Burbank. Any values? C.

A: The sample is silicates of iron, aluminum and manganese.

Calcite.

LOS ANGELES, March 2.—Q: Please test this quartz for copper and silver. M.

A: The sample is crystallized lime carbonate. Copper absent, and microscopic pyrite (iron sulphide) is sparingly present. Not analyzed for silver.

"Indian War Paint."

SAN BERNARDINO, March 2.—Q: The sample was obtained from a locality on the desert of San Bernardino county. Does it contain cinnabar? S.

A: Mercury absent, and therefore the sample is not of cinnabar. It reacts for iron, and the specimen is named in the subheading. Material the sample can readily be marketed for crayon manufacture and as "mineral paint." It is

subheading, and it is lime, soda and potash feldspar. The potash present is not water soluble.

Impure Fuller's Earth.

LOS ANGELES, March 1.—Q: Under separate cover I am sending you a sample of mineral obtained from an old river bed in Northern California. Before being exposed to the air it was somewhat moist and solid. Kindly tell me if the substance has any commercial value, and of what it is composed. P.

A: "Useful Minerals of the United States," a valuable publication of the United States Geological Survey, refers to mineral like the sample as which I am mailing you. I would like to know what minerals—if any—each sample contains. R.

No. 1 carries traces of chlorite in a silicate of various rocks and minerals. Microscopic graphite and galenite sparingly present, and copper a trace. Further on this quantitative analysis must be obtained. No. 2 contains microscopic iron (hematite) and some flake graphite.

Quite a Mixture.

PHOENIX (Ariz.) March 1.—Q: Will you kindly analyze (and publish results in your "In the Earth" department) the samples of ore which I am mailing you. I would like to know what minerals—if any—each sample contains. R.

No. 1 carries traces of chlorite in a silicate of various rocks and minerals. Microscopic graphite and galenite sparingly present, and copper a trace. Further on this quantitative analysis must be obtained. No. 2 contains microscopic iron (hematite) and some flake graphite.

Red and Yellow.

PROVO (Utah) March 1.—Q: The samples are (7) and (8), I am completely puzzled by them. A. L. T.

A: Correspondents should send separate letters, and not write requests on postcard containers. One of the specimens is golden-yellow, and the other is orange-yellow. It dissolves in aqua regia and aqueous ammonia, and it contains some per cent arsenic, with 28 per cent sulphur. Before the blowpipe, on charcoal, the specimen yields sulphurous and arsenical fumes, and butts with a bluish flame. The other specimen is of a reddish color and its streak is orange-yellow. It is known as realgar (bismuthide of arsenic). Before the blowpipe it yields black and shows a shining streak. It adheres to the tongue but slightly; becomes translucent in water and falls to a pulpy impalpable powder, without forming a paste with water. The sample is in specific weight 2. It is an earthy hydrous aluminum silicate, and contains approximately 48 per cent silica, alumina 28, and water 25 per cent. Fuller's earth was formerly used in great quantities by manufacturers of cloth, for cleaning woolen cloth, and the reasons for such uses are that the earth possesses a wonderful capacity for absorbing grease and oils, and this operation is called "fulling"; hence the name fuller's earth was given to the substance employed.

Owing to the many deposits of impure fuller's earth, other substances for this fulling and cleaning of woolen cloths are now used for the purposes indicated, but, owing to the high grade of the sample, it is probable that it can be marketed in California for the filtering of natural oils and for clarifying the various greases at abattoirs.

Complex Sulphides.

Calcite.

LOS ANGELES, March 2.—Q: Please test this quartz for copper and silver. M.

A: The sample is crystallized lime carbonate. Copper absent, and microscopic pyrite (iron sulphide) is sparingly present. Not analyzed for silver.

"Indian War Paint."

SAN BERNARDINO, March 2.—Q: The sample was obtained from a locality on the desert of San Bernardino county. Does it contain cinnabar? S.

A: Mercury absent, and therefore the sample is not of cinnabar. It reacts for iron, and the specimen is named in the subheading. Material the sample can readily be marketed for crayon manufacture and as "mineral paint." It is

subheading, and it is lime, soda and potash feldspar. The potash present is not water soluble.

Impure Fuller's Earth.

LOS ANGELES, March 1.—Q: Under separate cover I am sending you a sample of mineral obtained from an old river bed in Northern California. Before being exposed to the air it was somewhat moist and solid. Kindly tell me if the substance has any commercial value, and of what it is composed. P.

A: "Useful Minerals of the United States," a valuable publication of the United States Geological Survey, refers to mineral like the sample as which I am mailing you. I would like to know what minerals—if any—each sample contains. R.

No. 1 carries traces of chlorite in a silicate of various rocks and minerals. Microscopic graphite and galenite sparingly present, and copper a trace. Further on this quantitative analysis must be obtained. No. 2 contains microscopic iron (hematite) and some flake graphite.

Quite a Mixture.

PHOENIX (Ariz.) March 1.—Q: Will you kindly analyze (and publish results in your "In the Earth" department) the samples of ore which I am mailing you. I would like to know what minerals—if any—each sample contains. R.

No. 1 carries traces of chlorite in a silicate of various rocks and minerals. Microscopic graphite and galenite sparingly present, and copper a trace. Further on this quantitative analysis must be obtained. No. 2 contains microscopic iron (hematite) and some flake graphite.

Red and Yellow.

PROVO (Utah) March 1.—Q: The samples are (7) and (8), I am completely puzzled by them. A. L. T.

A: Correspondents should send separate letters, and not write requests on postcard containers. One of the specimens is golden-yellow, and the other is orange-yellow. It dissolves in aqua regia and aqueous ammonia, and it contains some per cent arsenic, with 28 per cent sulphur. Before the blowpipe, on charcoal, the specimen yields sulphurous and arsenical fumes, and butts with a bluish flame. The other specimen is of a reddish color and its streak is orange-yellow. It is known as realgar (bismuthide of arsenic). Before the blowpipe it yields black and shows a shining streak. It adheres to the tongue but slightly; becomes translucent in water and falls to a pulpy impalpable powder, without forming a paste with water. The sample is in specific weight 2. It is an earthy hydrous aluminum silicate, and contains approximately 48 per cent silica, alumina 28, and water 25 per cent. Fuller's earth was formerly used in great quantities by manufacturers of cloth, for cleaning woolen cloth, and the reasons for such uses are that the earth possesses a wonderful capacity for absorbing grease and oils, and this operation is called "fulling"; hence the name fuller's earth was given to the substance employed.

Owing to the many deposits of impure fuller's earth, other substances for this fulling and cleaning of woolen cloths are now used for the purposes indicated, but, owing to the high grade of the sample, it is probable that it can be marketed in California for the filtering of natural oils and for clarifying the various greases at abattoirs.

Complex Sulphides.

PRESCOTT (Ariz.) March 2.—Q: I am sending you a specimen of rock found near Prescott. Persons who claim to know, say it is "nickel ore." Please test it. I always value your information highly. R.

A: It is to be regretted that the sample was too minute for a good qualitative analysis. Owing to the many substances present (volatiles, arsenic and sulphides), a positive reaction for nickel could not be determined from the small quantity of material at hand.

Under a powerful microscope cubes of galenite appear in the sample, with some pyroxene (coccoites), zinc, arsenic, copper present and cobalt detected sparingly. This ore should be quantitatively analyzed.

Doubtful Ores.

BURBANK, March 2.—Q: One sample from San Fernando range about one and a half miles east of Burbank. Any values? C.

A: The sample is silicates of iron, aluminum and manganese.

Calcite.

FLYNN TO BOX IN THIS CITY.

Bennie Dobbert, who is

handling the matter, is

for Jim Flynn, former

aspirant for the heavyweight

championship honors, is in

the city and has arranged for

a bout between Flynn and Jim

Cameron, a well known

colored boxer to be held here

on March 27 for the benefit

of the Women's Day Nursery

of Los Angeles.

The match will be a four-

round affair and will be the

last in which Flynn will par-

ticipate in this city for some

time to come as he is

going to make an extensive

tour of the East.

Flynn is well known in this

city and is a boxer of con-

siderable reputation. The fight

attracted more attention than

any other in which he par-

ticipated was the one with

Jack Johnson at East Las

Vegas, N. M., on July 4, 1912,

which he lost to the negro on

a foul.

The place at which the bout

will be held has not yet been

determined, but will be se-

lected within the next few

days.

QUALIFYING ROUND AT SAN GABRIEL.

MONSTER CATCH OF LONG AGO.

(LOCAL CORRESPONDENCE)

AYALON, March 15. — Ed

A. Sheahan of Chicago, Ill.,

who is a guest at the Hotel

St. Catherine, has received

a letter from Marc Newman

with the following clipping

taken from the Los Angeles

Times, dated Sunday, Decem-

ber 1, 1918:

"C. L. Heven, who is an

indefatigable sportsman, and

Marc Newman, with Jim

Gardner as boatman, took

eighty-four whitefish and rock

bas-and two yellowtail in yester-

day's fishing."

In his letter to his friend

Mr. Newman says: "Please

note the attached clipping and

I hope that you do as well as

I did while fishing at Cata-

line."

VICTORY WON BY HOME TEAM.

Society Turned Out En Masse

to See the Game.

Battle of Stevenson and Drury

Featured.

Beautiful Mounts Win Ad-

miration of Crowd.

CORONADO, March 16. —

The Coronado Country Club polo

tournament opened today with the best

and fastest polo that has been played

here since the English teams were

here five years ago. The Coronado

team won over Hugh Drury's fast Del

Monte team by the score of 6 to 4.

Fast and furious play, excellent

mounts and players all on tip toe

with excitement in the game and a

crowd on the side lines that was

enthusiastic in the extreme made the

best game seen here for years.

Society turned out en masse and

occupied the parking spaces about

the field, a crowd of more than 1000

witnessing the game.

This, the first game of the tourna-

ment, was for the Joseph J. Jewett

challenge polo cup. A feature of the

game was the way in which Hugh

Drury, the western player, and Mal-

colm Stevenson, the famous eastern

player on the Coronado team battled

throughout. Each played fast and

fervently, and rode each other off

time and again. Stevenson did not

play his best until the last four pe-

riods when he played in a way that

more than justified his nine-goal rat-

ing.

The beautiful mounts of Maurice

Heckner, who brought from the

East for his Del Monte games, a won-

derful pair of ponies, were the al-
